

PREMGRIPP®

WITH PATENTED TECHNOLOGY

After three years of development, a new generation sock with enhanced integration of grip properties to maximise the power transfer when changing direction. Premgripp® will perform time after time, wash after wash, enabling the individual to achieve their full potential.

Premgripp® is a versatile sock that can be used in many sports categories. Designed to increase the grip between the foot and the shoe to increase performance margins. Premgripp® has anti-blister properties and with its fully elasticated foot moulds itself to your feet.

"I've had a number of first team players trialling the new Premgripp® sock and have received positive feedback from all involved. They offer extreme comfort and the gripping technology is a definite plus"

**Premier League Leicester City
Kit man Paul McAndrew (Macca)**

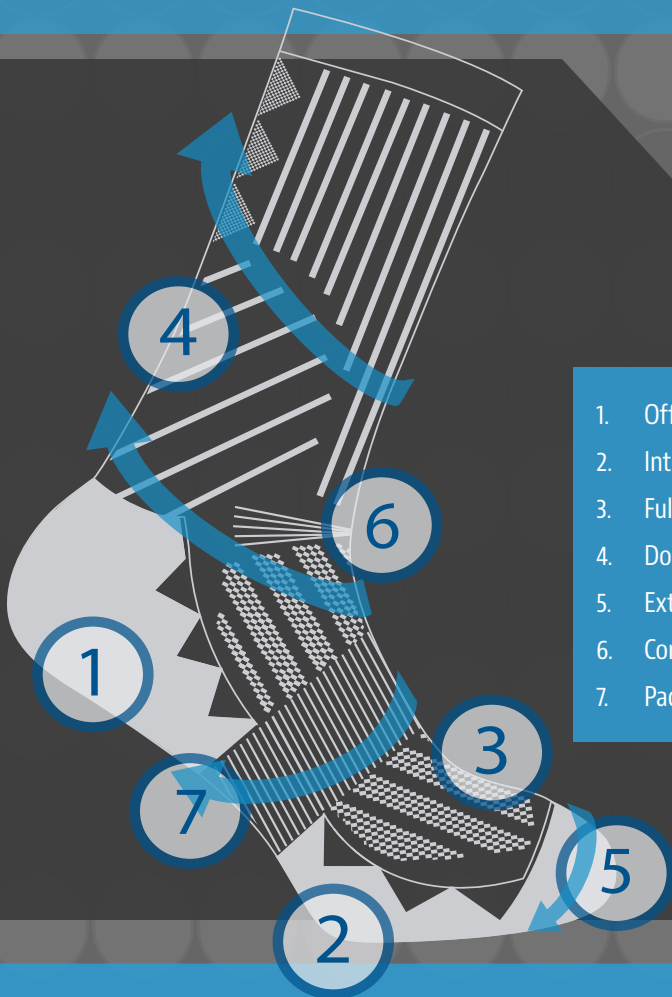

The **Offset Foot Technology** helps to stimulate your nerve endings which are connected to your calf muscles, inturn enhancing the lower leg blood circulation.

The integrated **Grip Technology**

Reinforced Ankle
padding for protection

1. Offset technology to help stimulate the blood circulation from the foot to the leg.
2. Integrated technology inside and outside of the foot to enhance your grip.
3. Fully elasticated foot giving the perfect moulded sock to foot scenario.
4. Double density padding to ankle for enhanced protection.
5. Extended padding in the toe area for further comfort.
6. Corrugated in the articular area of the foot to prevent creasing.
7. Padded sole for ultimate comfort.

When wearing the socks for the first time the Premgripp® technology feels significantly different from any other socks you have previously worn.

The Premgripp® system on the inside and outside of the socks works when your full body weight is transferred to your feet. The cushioning will expand after washing giving a softer and more comfortable feel when worn.

THE PREMIER SOCK WITH PADDED PROTECTION GRIP AND POSITIVE POWER FOR YOUR FEET

PREMGRIPP®

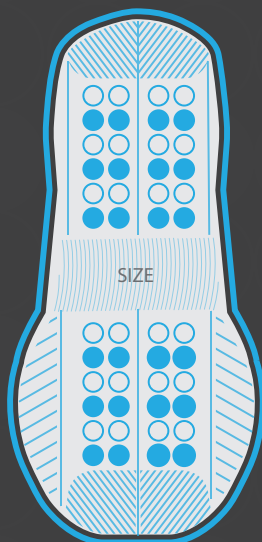

WITH PATENTED TECHNOLOGY

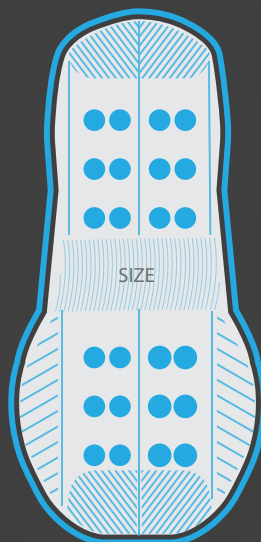

A simple concept, sock technology, agility, grip and positive power.

- No skin irritation, no allergic reaction (laboratory tested)
- Easily stretchable and smooth elastic recovery
- Keeps grip performance and recovers its shape and comfort even after many washes
- Gentle & form fitting
- Extra-comfort
- The material has been fully tested to Oekotex standard 100, meaning it does not contain heavy metals and Chloro Organic Catalysts.
- The material does not contain any flame retardants or Biozides.
- The material is not a hazardous substance or preparation according to EC directives 67/548/EEC or 99/45/EC
- The final cured material has also been tested for suitability for contact with the human skin.
- BSL BIOSERVICE Scientific Laboratories GmbH. Additional independent testing has shown that the material is suitable for contact with sensitive skin.

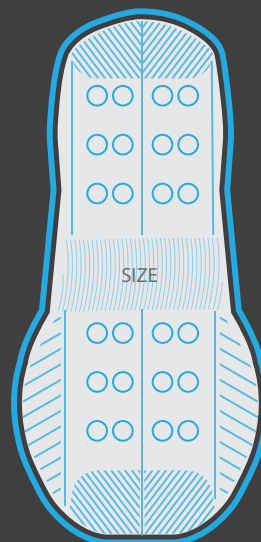

Premgripp® is a new generation product with enhanced integration of grip properties to maximise the power transfer when changing direction.
